DETAILED ACTION

1. Claims 1-9 are in the application.
2. New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because **the new set of drawings filed 8/3/2004 has the figures labeled differently than the original set of drawings filed 3/16/2004. It is noted that the original labeling concurs with the description in the specification; the new set of drawings does not.** Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1, 4, 7 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Rasmussen.

Rasmussen discloses a method and apparatus for inhibiting growth of fauna on a ship hull comprising the step of bubbling gas which reduces the oxidation potential of water in

proximity to the hull. The method includes the use of bubblers 8 mounted in proximity to the outer surface of a vessel's hull.

Allowable Subject Matter

5. Claims 2, 3, 5, and 6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. Claim 9 is allowed.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Anderson, Lund et al and Diprose et al disclose marine antifouling systems.
